About Intellitronics

Intellitronics, Inc. is a small technology services and solutions provider Incorporated in August 2003 with personnel throughout the eastern United States, including Orlando FL, Arlington VA, Patuxent River Maryland, as well as Washington DC.

Intellitronics currently supports a number of federal government agencies where we provide a host of solutions to track and monitor management information, and automating enterprise business processes. In the past three years, we have experienced sustainable growth in the area of Electronic Health Record systems, Microsoft Office SharePoint Services, Software Development & Design, and System Integration.

Mission Statement:

Intellitronics' mission is to provide quality products and solutions and outstanding services that exceed the customers expectations, meet customers requirements, and executed to completion in a timely manner and on-budget.

- We commit to exceeding our customers' expectations for quality and professional excellence while delivering products and solutions on-time and within budget.
- We maintain the highest standards of ethical behavior and professional integrity.
- We employ people of exceptional creativity, expertise, and determination to work closely with our customers.
- We pursue technical growth and market diversification to increase value for our customers and opportunities for our employees.
- We foster an environment that promotes technical excellence and professional and fiscal growth.

Intellitronics Core Competencies

Enterprise Portals and Web Applications

Intellitronics will help you meet the increasing demand for transparency and accountability. Our solutions leverage leading web technologies and integrate into your existing systems, while complying with all federal security requirements. Whether you want to develop an enterprise web application or improve usability through a world-class user experience, our team can design and implement a comprehensive web strategy that's in line with your agency's performance goals.

Our business-focused process for developing enterprise portals and web applications enables you to:

- Automate critical business processes to ensure accuracy and consistency
- Integrate with existing agency systems to allow for incremental migration to leading-edge web architectures
- Create superior usability with fully tested, 508-compliant interfaces
- Maintain a consistent agency brand across websites, applications, and offline channels
- Communicate with constituents in an accurate, timely, and cost-effective way
- Synchronize communication channels across departments, agencies, and regions
- Ensure compliance with federal and agency IT governance requirements, such as security and Enterprise Architecture

Related expertise includes: SharePoint® development, application architecture, web application design and development, user-centered design and usability, content management, branding, social media, and business case development.

Application Development

Well-designed and well-engineered software is critical to the success of all Intellitronics solutions. Whether you want to enhance your existing system, need to integrate Commercial Off-The-Shelf (COTS) products, or require a custom software solution, we'll help maximize your investment. Our technical approach is based on SEI CMMI Level 3 processes and the Rational Unified Process (RUP), an industry-recognized system of software development best practices. You can depend on us for scalable, next-generation technology solutions to your business problems.

Related expertise includes: SharePoint® development, .NET development, Windows® Phone 7 application development, database design, database development, web application design and development, as well as user-centered design and usability.

Mobile Platform Development

No matter which mobile platform is best suited for your solution, Intellitronics is well trained in all mobile platforms to fit your business with the perfect mobile solution. Our expertise includes Windows® Phone 7, iPhone, iPad, Android OS, and HP webOS development.

Intellitronics Core Competencies (cont.)

Advanced Healthcare Solutions

No government function is more affected by advances in technology than health care. Innovation goes beyond just developing new medical devices; it's about innovating the way medical information is managed, exchanged, and used. New methods of accessing, sharing, and utilizing health care records and information are changing the way health care providers deliver care. Intellitronics applies special expertise in Electronic Health Record (EHR) system to modernize the way government agencies administer and manage health care.

We understand the unique challenges—internal and external—agencies face in adapting to the next generation of health care. Through our ongoing support of government healthcare organizations—including the Military Health Systems, and Defense Health Information Management Systems—we've maintained proven systems, mature processes, and best practices that uniquely position us to address your agency's health care-related technology needs.

Program and Project Management

Effective project management is the foundation of our process and is critical to achieving the results our customers need from their e-Government programs. Currently, all of our project managers hold PMI's Project Management Professional (PMP) certification. Our Software Engineering Institute (SEI) Capability Maturity Model Integration (CMMI) Level 3 Service Delivery Process provides our project managers and team members with a standardized, repeatable, and flexible delivery process that is continuously monitored for adherence and improvement opportunities.

Intellitronics Past Performance

DHIMS – AHLTA Theater Sustainment

Intellitronics provides operational support and enhancement software services for the largest battlefield Electronic Health Record (EHR) system in the Department of Defense (AHLTA Theater).

AHLTA-Theater serves as the Theater configuration of AHLTA, the military's Electronic Health Record (EHR). AHLTA-Theater extends the EHR capability of the military's stateside treatment facilities to the deployed environment. It allows healthcare providers to document care and store medical data until communications are available to send the information to the Theater Medical Data Store (TMDS) and Clinical Data Repository (CDR). The long-term goal of AHLTA-Theater is to provide complete and accurate documentation of patient care at every step on a continuing basis.

With AHLTA-Theater, healthcare providers and other members of the clinical staff have the patient's health history available on demand and can enroll new patients and fully document their care. Should the warfighter be injured, become ill or expire, AHLTA-Theater is used to update the clinical record on a continuing basis, following the patient from first responder to every additional level.

Intellitronics provides program management, systems analysis, Oracle database design and development, application design and development, and helpdesk support services for this contract.

Intellitronics Past Performance (cont.)

Department of Labor

At the United States Department of Labor, more specifically, Office of the Assistant Secretary for Administration and Management (OASAM), Information Technology Center (ITC), Intellitronics provided software solution enhancement support to enable DOL business customers to further automate and refine business processes, and improve the achievement of operational business objectives. In addition to project management, code development and database updates, Intellitronics support also includes producing SDLC documentation, provide professional consulting services to support its technology governance and customer development activities across 30+ applications within the DOL portfolio.

Intellitronics provided program management, SharePoint development, systems analysis, Microsoft SQL Server database design and development, application design and development, and helpdesk support services for this opportunity.

Customer focused, solution oriented, and support minded

Intellitronics Past Performance (cont.)

Office of National Drug Control Policy (ONDCP)

Intellitronics also provided support to the Office of National Drug Control Policy (ONDCP) in supporting the automation of business processes, including requirements analysis, development, design, implementation, and support of business applications, including a Correspondence Action Tracking System (CATS).

Intellitronics performed requirements analysis, information architecture, software design, development, and supported the ONDCP CATS initiative which was written to replace a paper process for internal and external office correspondence. CATS provides the ability to track individuals, invitations, letters, as well as memos that are sent via postal mail, email, phone, walk-in or fax inquiries.
